

Assessing Power As Wealth

Proto-Mathematical Considerations

Russia has demonstrated that power among the nations is not unipolar, not under, today, unitary management by a self-selecting, self-installed, self-serving cabal of Euro-American Fascists, aka Ashkenazy Jewish and Episcopal atheists.

The world – meaning the congregation of nations – is said to be now *multipolar*. I prefer the adjective *organic*. Inter-nation relations are most accurately felt as botanical rather than mechanical: Life-Force (*Élan vital*) ebbing and flowing more than greased parts turning against one another.

Statesmen, warriors, engineers, industrialists, and merchants are obliged to assess now, as salient to their intentions, organic origins and orders of national and multi-national power operating in dynamic simultaneity.

This study describes a tool for making such assessments.

Power and wealth are the same thing. However, one can gain more specificity measuring power as wealth than one can by measuring wealth as power. Therefore, I propose to adduce a set of factors, proto-mathematical considerations – a tool – that measures wealth.

Population
Congeniality
Commodities

Although not a mathematician, I believe sub-factors of these three major factors can be worked up by someone who is a mathematician – differential equations *et al.* – into a tool for tabulating the wealth and therefore the actual power of a claimed center of national or multi-national power.

The more wealth, the more actual power.

The less wealth, the less actual power.

The factors are listed in order of importance, most important to less most important. Given numerical weights – say, 1 (low) to 10 (high) – these factors and their sub-factors, summed up, help one assess whether a specific power or claim to power is actual or affected. Actions may be undertaken, or not, based on assurances predicted by and judgements made in view of such an assessment.

Population

Serenity (lives without fear of abuse, or not)

Cohesion (reveres their nation and her history, or not)

Quality (does real education, makes engineers, or not)

Composition (multi-ethnic and multi-religious, or not)

Distribution (towards rural, real family, or not)

Congeniality

Willing to trade fairly, openly.

Willing to listen as well as talk.

Willing to overlook slights.

Willing to honor strong warnings.

Willing to let others compete.

Commodities

Breathable Air

Potable Water

Arable Land

Biologicals (seeds, trees, vines, animals, fish, insects, molds)

Transportation (railway, highway, waterway, pipe, power, fiberoptic lines)

Chemicals

Minerals

Protective Natural Barriers

Tourist Destinations

By definition, someone contemplating offensive aggression towards a nation or group of nations will not use this power assessment tool, or, will use but part of it. Someone contemplating defensive aggression towards a nation or group of nations will find this power assessment tool useful.

Population (Measure of Wealth: 1 is Low, 10 is High)	
Serenity (lives without fear of abuse, or not)	1 to 10 =
Cohesion (reveres their nation and her history, or not)	1 to 10 =
Quality (does real education, makes engineers, or not)	1 to 10 =
Composition (multi-ethnic and multi-religious, or not)	1 to 10 =
Distribution (towards rural, real family, or not)	1 to 10 =
	Total =

Congeniality (Measure of Wealth: 1 is Low, 10 is High)	
Willing to trade fairly, openly.	1 to 10 =
Willing to listen as well as talk.	1 to 10 =
Willing to overlook slights.	1 to 10 =
Willing to honor strong warnings.	1 to 10 =
Willing to let others compete.	1 to 10 =
	Total =

Commodities (Measure of Wealth: 1 is Low, 10 is High)	
Breathable Air	1 to 10 =
Potable Water	1 to 10 =
Arable Land	1 to 10 =
Biologicals (seeds, trees, vines, animals, fish, insects, molds)	1 to 10 =
Transportation (railway, highway, waterway, pipe, power, fiberoptic lines)	1 to 10 =
Chemicals	1 to 10 =
Minerals	1 to 10 =
Protective Natural Barriers	1 to 10 =
Tourist Destinations	1 to 10 =
	Total =

Grand Total (Measure of National Wealth = Measure of National Power)	
Population	Of Possible 50 Points, Total =
Congeniality	Of Possible 50 Points, Total =
Commodities	Of Possible 90 Points, Total =
	Of Possible 190 Points, Grand Total = (This tabulation measures / assesses a nation's or group of nations' actual wealth, meaning, their actual power.)
